DETAILED ACTION

Allowable Subject Matter

1. **Claims 1-6, 10-11 and 15-16** are allowed.
2. The following is an examiner's statement of reasons for allowance:

In terms of claim 1, the prior art of record does not teach alone or in combination a image sensor test system comprising a contact arm configured to pick up and move the inverted image sensor inverted by the first inverter, the contact arm being configured to bring input/output terminals of the inverted image sensor into electrical contact with a contact of the test head; an attachment portion configured to attach the light source and the test head to the image sensor test system so as to place the light source and the test head beneath the image sensor, in combination with all other elements in claim 1.

As to claims 2-5, the claims are allowed as they further limit allowed claim 1.

In terms of claim 6, the prior art of record does not teach alone or in combination a image sensor test system wherein each of the first and second inverters comprises a rotation mechanism, wherein the rotation mechanism comprises a pinion gear which supports the first holder and a rack which intermeshes with the pinion gear and converts linear force supplied to the rack gear to rotational force so as to rotate the first holder, in combination with all other elements in claim 6.

In terms of claim 10, the prior art of record does not teach alone or in combination an image sensor test system comprising a judging means device configured to judge an emission pattern of light emitted from the light source and an input pattern of electrical signals input from a contact of the test head based on image information obtained by the imaging device, in combination with all other elements in claim 10.

As to claim 11, the claims are allowed as they further limit allowed claim 10.

In terms of claim 15, the prior art of record does not teach alone or in combination a method for an image sensor comprising a judgment step of judging an emission pattern of light emitted from the light source and an input pattern of electrical signals input from a contact of the test head based on the device type information obtained in obtaining the image of the image sensor, in testing the inverted image sensor, emitting light to the light receiving surface of the image sensor in accordance with the emission pattern and inputting and outputting electrical signals between the contact of the test head and the image sensor in accordance with the input pattern, in combination with all other elements in claim 15.

As to claim 16, the claims are allowed as they further limit allowed claim 15.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
